

CLAIMS

What is claimed is:

5 Claim 1. A clamp assembly for securing a flexible cable comprising an elongated body portion, a bore extending through the body portion, a clamping screw mounted in a sidewall of the body portion mounting a shoe at its inner end which snugly fits in a pocket, said shoe having an arcuate face to snugly embrace the cable and means defining a recess in the bore wall located opposite said shoe whereby rotation of screw in direction to advance the shoe inwardly presses the cable into the recess to firmly lock it in place.

10 Claim 2. A clamp assembly as claimed in Claim 1 wherein the bore is offset at its upper end and is flared outwardly in of a gradually increasing diameter greater than the diameter of the central bore section.

15 Claim 3. A clamp assembly as claimed in Claim 1 including a hook formed integrally with the body portion for removably securing the clamp assembly to a suitable loop, ball or ring on an aircraft wing.

Claim 4. A clamp assembly as claimed in Claim 1 wherein the shoe is mounted at the inner terminal end of said threaded shank in a manner to allow rotational movement of the threaded shank without rotating the shoe.
